

Label the Chicken Egg (10 days old) #1

Label a 10-day old chicken embryo in egg.

©EnchantedLearning.com

air cell - a space at the large end of the egg, between the inner and outer shell membranes.

albumin - the egg white. It provides protein and water for the embryo and protects it from microorganisms.

eggshell - the hard, protective coating of the egg. It is semi-permeable; it lets gas exchange occur, but keeps other substances from entering the egg. It is made of calcium carbonate.

embryo - the developing chick inside the egg.

eye - large and prominent on the head.

leg - one of the lower limbs of the chick.

tail - located at the far end (the posterior) of the embryo.

wing - one of the upper limbs of the chick.

yolk - the yellow part of the egg; it contains nourishment (food) for the embryo.
