May in the Garden:

What to plant?

- Direct seed in the garden cucumbers, melons, summer squash, beans, corn, and annual herbs.
- Plant sunflowers, zinnias, cosmos, marigolds and aster in the flower garden.

Chores:

- Fertilize summer blooming flowers early in the month.
- Apply (or re-apply as needed) organic mulch to all beds to keep the soil cool and enrich the soil. Be sure to leave space around the base of the plants.
- Trim the dead flowers but not the leaves from spring bulbs. The leaves restore the bulb; so wait to remove them until they turn yellow. Fertilize the bulbs after the bloom is finished with bone meal.
- Later in the month prune spring flowering shrubs to shape, removing old and dead wood. The plants flower on the growth that happens during the summer; do not prune in the fall or winter or you will have no flowers on the shrub.
- Continue the battle against slugs and snails.
- Deadhead (cut off spent flowers) to get continuing bloom on annuals and perennials.
- Thin peaches, plums and nectarines so there is 6" between fruits.
