We are still finding eggs on our NOW traps (.91 eggs/trap/day) and will continue to monitor through the next generation.

This is the last Tehama Pest Update for 2013. We will continue to follow NOW using our egg, pheromone and female traps to gain more experience with those techniques. Will have more updates for you starting March 2014.

Additional Pest management information plus twilight temperatures are available at the UC IPM website including a day degree calculator. <http://www.ipm.ucdavis.edu>.
