Codling moth are currently at 1152 Degree days by our temperature sensor / Degree Day calculator (Harvest Guard) located in an almond orchard close to Red Bluff on Highway 99 E. In the Ashley orchard that we monitor we have not seen an increase in trap catch yet.

For NOW, we finally got traps with no eggs.

Although it is early, we have Walnut Husk Fly traps up and as you would expect we have caught no flies yet. The earliest catch in our data set was June 12.

Additional Pest management information plus twilight temperatures are available at the UC IPM website including a day degree calculator. <http://www.ipm.ucdavis.edu>.
