For the Tehama Ashley walnut orchard that we monitor we set the male biofix at 3/16/15. First sprays are timed 300 Degree Days following the male biofix. We are currently at 273 which means we have 27 remaining. First spray timing would be about 3 days from now.

The next event will be the "1B" at about 600 DD

Double sided sticky tape monitoring in Howard and Chandler indicates no walnut scale crawler activity as of 4/13/15

Additional Pest management information plus twilight temperatures are available at the UC IPM website including a day degree calculator. <http://www.ipm.ucdavis.edu>.
