

# EPA PROPOSED MITIGATIONS

## WHAT TO EXPECT

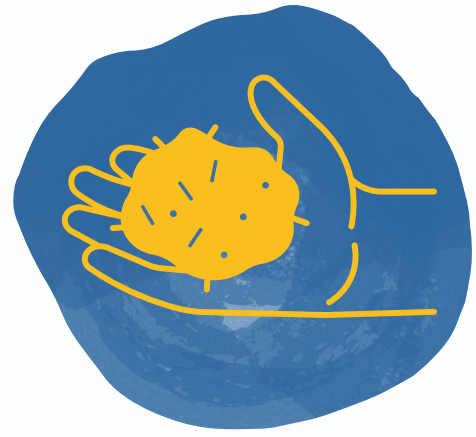

### RESTRICTED USE PESTICIDES

Applicators will need to be certified to apply these products in agricultural settings

### ABOVEGROUND APPLICATIONS ELIMINATED

In cropped areas, rangeland, pastureland, and fallow land, this change would leave only bait stations for ground squirrels and voles

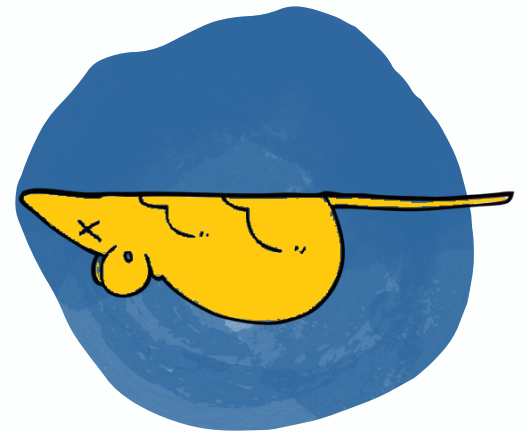

### RESTRICTIONS ON WITHIN BURROW APPLICATIONS OF FGARS

This would eliminate FGAR applications for pocket gophers for much of the year, and would eliminate it for some crops (e.g., citrus and alfalfa in certain areas of the state)

### CARCASS SEARCHES

Carcass searches will be required every one to two days for at least two weeks after first application

### PPE

Proposed changes will require a APF-10 respirator that will require fit testing for all applicators of these products

### ENDANGERED SPECIES

Endangered species restrictions will limit applications to bait stations within these species' ranges
