Prepared January 2011 by Brooke Kliewer

**Introduction:** In 2010 the Intermountain Research & Extension Center (IREC) conducted three potato variety trials: a Russet Trial with 29 entries, a Specialty Trial with 32 entries, and a Chipper Trial with 18 entries. The trials included entries from the Western Regional (WR) and Southwest Regional (SWR) variety development programs and varieties of local interest.

**General Comments:** At maturity, a total of 316 plots were harvested for tuber yield and graded for size, internal, and external qualities. Season weather included a dry mild winter, cool spring, and 75 frost-free days between June 16<sup>th</sup> and August 31<sup>st</sup>. Early die symptoms were observed in all trials. Weather data can be found at: <http://www.cimis.water.ca.gov/cimis/welcome.jsp>

## Results

### Late Russet Variety Trial

#### Cultural Information:

<b>Location:</b>	Intermountain Research & Extension Center, Tulelake, CA
<b>Soil Type:</b>	Tulebasin mucky silty clay loam
<b>Planting Date:</b>	May 13
<b>Vine Kill Date:</b>	September 16: Roll vines and application of Reglone at labeled rate
<b>Days to Vine Kill:</b>	126 days
<b>Harvest Date:</b>	October 7
<b>Irrigation:</b>	Solid-set sprinklers; total irrigation +precipitation = 26.06 inches
<b>Plot Length:</b>	22 hills
<b>In-Row Spacing:</b>	10.0 inches
<b>Row Spacing:</b>	36 inches
<b>Number of Reps:</b>	4 replications
<b>Fertilizer:</b>	195-246-6-84

<b>Weed Control:</b>	Cultivation and Outlook (pre-emergence), Matrix and Sencor (post-emergence)
<b>Insecticides:</b>	Movento and Coragen (aerial application)
<b>Fungicides:</b>	Maxim (seed treatment), Quadris & Blocker (in-furrow at planting), Bravo & Quadris (foliar applications)
<b>Fumigation:</b>	Vapam at 35 gallons per acre

The Late Russet Variety Trial conducted at IREC included 21 entries from the Western Regional Program, 4 entries from the Southwest Regional Trial, and 4 entries of local interest. The highest yielding variety in the trial was Alpine with a total yield of 554 cwt/A and U.S. No. 1 yield of 432 cwt/A. The second highest yield was the experimental entry A98345-1; this entry also was a top producer in 2009. AC99375-1RU was another entry with a total yield over 500 cwt/A. This entry was one of the top yielding varieties at IREC for the past three years. Entry AOTX98152-3RU was the best performing Southwest Trial entry with regard to total and U.S. No. 1 yield. The following bullets summarize trial results. See Tables 1-4 for a complete listing of trial results and Figure 1 for entry comments.

#### **Stand Counts**

- **42 Days After Planting**

All entries had greater than 90% emergence except for: PA99N2-1 (66.8%), AOTX96216-2RU (85.0%), and Classic (86.8%).

#### **Plant and Tuber Growth and Development**

- **Average Tuber Number Per Plant**

Most: PA99N2-1 (8.4) and PA00N14-2 (8.2)

Least: AOTX96216-2RU (3.8) and A00324-1 (4.8)

- **Average Tuber Size (oz.)**

Largest: AOTX96216-2RU (11.3) and PA99N2-1 (7.6)/ A00324-1 (7.6)

Smallest: PA00N14-2 (4.9) and CO98067-7RU (5.0)

- **Undersized Tubers (<4oz.) cwt/Acre**

Most: CO98067-7RU (85) and PA00N14-2 (84)

Least: AOTX96216-2RU (11) and CO99100-1RU (25)

## Yield and Return

- **Total Yield (cwt/Acre)**

Highest: Alpine (554) and A98345-1 (521)

Lowest: Russet Norkotah, SWR (361) and CO99053-4RU (368)

- **U.S. No. 1's Yield ( 4-16 oz.) cwt/Acre**

Highest: Alpine (432) and A01010-1 (420)

Lowest: AOTX96216-2RU (138) and CO98067-7RU (263)

- **Gross Return (\$/acre)**

This was calculated by using a four year average of fresh potato prices in the Columbia Basin and a packing shed cost of \$5.75/cwt.

Highest: Alpine and A98345-1 (both process market tubers)

Lowest: CO98067-7RU and AOTX96216-2RU

## Tuber Defect Incidence

- **Hollow Heart**

Notable Defects: Premier (58%), PA99N82-4 (50%), and AOTX96216-2RU (15%)

- **Vascular Discoloration- no statistical significance**

Notable Defects: A98345-1 (18%) and Alpine (13%)

- **Stem End Necrosis**

Notable Defects: AOTX96265-2RU (20%), Ranger Russet (15%) and Alpine (15%)

## Disease Susceptibility Rating:

- **Verticillium Wilt Rating, August 18<sup>th</sup> (0=0 symptoms, 9=90-100% of plants show symptoms of disease)**

Highest Rating: Russet Norkotah (8.8 for both entries) and CO99053-4RU (8.8)

Lowest Rating: PA99N2-1 (0.5) and A97066-42LB (0.8)

Rating Scales (Tubers evaluated were 12-16oz and/or 8-12oz size)

<sup>1</sup> 1=Worst, 5=Best - Fresh Market Russet Merit Score takes into account multiple factors important to fresh market appeal including tuber shape, eye depth, russeting, and shape uniformity

<sup>2</sup> 1=Light, 5=Heavy

<sup>3</sup> 1=Deep, 5=Shallow

<sup>4</sup> 1=Round, 5=Oblong

<sup>5</sup> 1=No Uniformity, 5= Very Uniform

<sup>6</sup> Ratio of 10 tubers measured from each plot

## Red Specialty Variety Trial

### Cultural Information:

<b>Location:</b>	Intermountain Research & Extension Center, Tulelake, CA
<b>Soil Type:</b>	Tulebasin mucky silty clay loam
<b>Planting Date:</b>	May 13
<b>Vine Kill Date:</b>	September 16: Roll vines and application of Reglone at labeled rate
<b>Days to Vine Kill:</b>	126 days
<b>Harvest Date:</b>	October 7
<b>Irrigation:</b>	Solid-set sprinklers; total irrigation +precipitation = 26.06 inches
<b>Plot Length:</b>	24 hills
<b>In-Row Spacing:</b>	9.0 inches
<b>Row Spacing:</b>	36 inches
<b>Number of Reps:</b>	4 replications
<b>Fertilizer:</b>	195-246-6-84
<b>Weed Control:</b>	Cultivation and Outlook (pre-emergence), and Matrix (post-emergence)
<b>Insecticides:</b>	Movento and Coragen (aerial application)
<b>Fungicides:</b>	Maxim (seed treatment), Quadris & Blocker (in-furrow at planting), Bravo & Quadris (foliar applications)
<b>Fumigation:</b>	Vapam at 35 gallons per acre

The Red Specialty Variety trial conducted at IREC included 16 entries from the Western Regional Trial, and 16 entries from the Southwest Regional Trial. The trial was broke into four different categories: Red skin and white fleshed, red/purple skin and yellow flesh, purple skin and purple flesh, and white/yellow skin and yellow flesh.

In the red skin and white flesh category, Red LaSoda (SWR) and Dark Red Norland (WR) were the top yielding entries with a total yield of 572 cwt/A and 558 cwt/A respectively. The highest yielding experimental entries were BTX2332-1R (WR) and AOTX91861-4R (SWR). BTX2332-1R (WR) has been a top performing entry for the past three years.

In the red/purple skin and yellow flesh category, two SWR entries performed the best; CO01399-10P/Y and COTX01403-4R/Y with a total yield of 605 cwt/A and 568 cwt/A respectively.

In the purple skin and purple flesh category ATTX01180-1R/Y (SWR) and Purple Majesty (WR) were the top yielding at 529 cwt/A and 481 cwt/A respectively. Most entries in this category produced a high percent of tubers in the less than four ounce size class.

In the white/yellow skin and yellow flesh category, two experimental varieties had higher yields compared to the standard Yukon Gold. A00286-3Y (WR) and A99433-5Y (WR) yielded a total of 559 cwt/A and 534 cwt/A respectively. The following bullets summarize IREC field results (not broken down into skin and flesh categories). See Tables 5-9 for complete results and Figure 2 for entry comments.

#### **Stand Counts**

- **42 Days After Planting**

All entries had greater than 90% emergence except for: NDTX5003-2R (84%), CO99076-6R (85%), Yukon Gold (89%), and ATTX88654-2P/Y (89%).

#### **Plant and Tuber Growth and Development**

- **Average Tuber Number Per Plant**

Most: Purple Majesty (11) for both entries and CO99256-2R (10)  
Least: Red Lasoda (6) and Yukon Gold (6)

- **Average Tuber Size (oz.)**

Largest: Red Lasoda (8.0/7.9), BTX2332-1R (7.1), and POR03PG80-2 (7.1)  
Smallest: TC02072-3P/P (3.1) and Purple Majesty, SWR (3.5)

- **Undersized Tubers (<4 oz.) cwt/Acre**

Most: Purple Majesty (231/204) and TC02072-3P/P (203)  
Least: POR03PG80-2 (32) and Red LaSoda (35/38)

#### **Yield**

- **Total Yield (cwt/Acre)**

Highest: CO01399-10P/Y (605) and Red LaSoda, SWR (572)  
Lowest: TC02072-3P/P (326) and A99331-2RY (349)

- **U.S. No. 1's Yield (4-14 oz.) cwt/Acre**  
 Highest: A99433-5Y (438) and AOTX91861-4R (422)  
 Lowest: TC02072-3P/P (108) and A99331-2RY (163)

#### **Tuber Defect Incidence**

- **Hollow Heart-no statistical difference**  
 Notable Defects: Yukon Gold, SWR (8%) and ATC00293-1W/Y (8%)
- **Vascular Discoloration**  
 Notable Defects: BTX2332-1R (25%) and ATTX01180-1R/Y (17%)
- **Stem End Necrosis**  
 Notable Defects: Yukon Gold (33/20%) and POR03PG80-2 (18%)

#### **Disease Susceptibility Rating**

- **Verticillium Wilt Rating, August 18<sup>th</sup> (0=0 symptoms, 9=90-100% of plants show symptoms of disease)**  
 Highest: Dark Red Norland, SWR (8.3) and COTX01403-4R/Y (8.0)  
 Lowest: A00286-3Y (1.5) and CO01399-10P/Y (2.0)

## Chipper Variety Trial

### Cultural Information:

<b>Location:</b>	Tulelake, CA- Grower Field (Walker Farms)
<b>Soil Type:</b>	Tulebasin mucky silty clay loam
<b>Planting Date:</b>	May 19
<b>Vine Kill Date:</b>	September 28: Reglone application at labeled rate
<b>Days to Vine Kill:</b>	132 days
<b>Harvest Date:</b>	October 13
<b>Irrigation:</b>	Solid-set sprinklers
<b>Plot Length:</b>	24 hills
<b>In-Row Spacing:</b>	9.0 inches
<b>Row Spacing:</b>	36 inches
<b>Number of Reps:</b>	4 replications
<b>Fertilizer:</b>	210-158-0-399 (grower field practice)
<b>Weed Control:</b>	Matrix, Metribuzin, and Prowl (post-emergence)
<b>Insecticides:</b>	Leverage (grower field practice)
<b>Fungicides:</b>	Maxim (seed treatment), Quadris & Blocker (in-furrow at planting), Bravo, Endura, and Manzate (grower field practice)
<b>Fumigation:</b>	Grower field practice

The Chipper Variety Trial was located in a cooperating farmer's field this year due to the Klamath Basin Water Shortage. Trial management was the same as the grower's commercial production practices. The Western Regional Trial included two standard varieties and five experimental varieties. The Southwest Regional Trial included the same two standard varieties and four experimental varieties. Seven varieties of local interest were included this year. IREC would like to thank Walker Farms for supporting our research efforts this year by allowing the Chipper Variety Trial to be located in one of their commercial potato fields.

Dakota Crisp was the top yielding chipper variety in regard to both total yield and U.S. No. 1's yielding 599 cwt/A and 470 cwt/A respectively. Atlantic was the next highest yielding variety with a total yield of 558 cwt/A and 434 cwt/A for U.S. No. 1's. The highest yielding experimental entry was a Southwest Regional entry, CO02024-9W with a total yield of 521 cwt/A. Black Scurf was evident on all entries in the Chipper Variety Trial this year. The following bullets summarize trial results. See Tables 10-13 for complete results and Figure 3 for entry comments.

### **Stand Counts**

- **37 Days After Planting**

All entries had greater than 85% emergence except for: Pike (75.0%), Dakota Pearl (80.2%), 6212 (84.0%), and 8402 (84.9%).

### **Plant and Tuber Growth and Development**

- **Average Tuber Number per Plant**

Most: 6212 (10.4) and CO02024-9W (10.2)  
Least: 8402 (4.7) and CO00270-7W (5.2)

- **Average Tuber Size (oz.)**

Largest: Chipeta (8.6) and 8402 (8.4)  
Smallest: 6212 (4.3) and A00188-3C (4.5)

- **Undersized Tubers (<4 oz.) cwt/Acre**

Most: 6212 (138) and CO02024-9W (125)  
Least: 8402 (22) and Chipeta (23)

### **Yield**

- **Total Yield (cwt/Acre)**

Highest: Dakota Crisp (599) and Atlantic (558)  
Lowest: CO00270-7W (357) and A00188-3C (392)

- **U.S. No. 1's Yield (4-14 oz.) cwt/Acre**

Highest: Dakota Crisp (470) and Atlantic (434)  
Lowest: CO00270-7W (259) and A00188-3C (260)

- **% Marketable Yield (4-14 oz.)**  
 Highest: Dakota Crisp (78%) and Atlantic (77%)  
 Lowest: 8402 (63%) and 6212 (63%)

### **Tuber Defect Incidence**

- **External Defects**  
 Dakota Pearl and AC01151-5W had the most knobs, 3502 and CO00270-7W had the most growth cracks, and CO00197-3W and AC01151-5W had the most greening.
- **Internal Defects**  
 Hollow Heart: Dakota Pearl (15.0%)  
 Vascular Discoloration: 6212 (16.7%), no statistical significance  
 Stem End Necrosis: 8402 (15.0%), no statistical significance

### **Specific Gravity**

- **Taken During Grading Process**  
 Highest: CO02033-1W (1.097) and 3502 (1.096)  
 Lowest: Dakota Crisp (1.082), AC01151-5W (1.083) and Dakota Pearl (1.083)

**Rating Scales**

<sup>1</sup> 1=Worst, 5=Best - Chipper Merit Score takes into account multiple factors important to the process market including tuber shape, shape uniformity, & eye depth.

<sup>2</sup> 1=Light, 5=Heavy

<sup>3</sup> 1=Deep, 5=Shallow

<sup>4</sup> 1=Round, 5=Oblong

<sup>5</sup> 1=No Uniformity, 5= Very Uniform

<sup>6</sup> Ratio of 10 tubers measured from each plot

**Storage**

U.S. No. 1 sacks for each variety were stored and then evaluated for shatter bruise, percent of cumulative shrink, percent of cumulative rot, turgor, and sprouting. The Russet and Specialty varieties were placed into storage at 40°F for 180 days with evaluations at approximately 60, 120, and 180 days after harvest. The Chipper varieties were placed into a separate storage bin at 50°F for 120 days and were evaluated at 60 and 120 days after harvest. Sprout inhibitor was not applied at any time during the storage duration. The relative humidity was set at 100%. See Tables 14-17 for complete results.

1= Rating of 1-3 (1= best or most desired, 3= worst or dark yellow to brown in color)

The University of California prohibits discrimination or harassment of any person on the basis of race, color, national origin, religion, sex, gender identity, pregnancy (including childbirth, and medical conditions related to pregnancy or childbirth), physical or mental disability, medical condition (cancer-related or genetic characteristics), ancestry, marital status, age, sexual orientation, citizenship, or service in the uniformed services (as defined by the Uniformed Services Employment and Reemployment Rights Act of 1994: service in the uniformed services includes membership, application for membership, performance of service, application for service, or obligation for service in the uniformed services) in any of its programs or activities. University policy also prohibits reprisal or retaliation against any person in any of its programs or activities for making a complaint of discrimination or sexual harassment or for using or participating in the investigation or resolution process of any such complaint. University policy is intended to be consistent with the provisions of applicable State and Federal laws. Inquires regarding the University's nondiscrimination policies may be directed to the Affirmation Action/Equal Opportunity Director, University of California, Agriculture & Natural Resources, 1111 Franklin Street, 6th Floor, Oakland, CA 94607, (510) 987-0096.
